

About the Premiere Cut

I will write down some simple steps for you to export the project for VFX process.

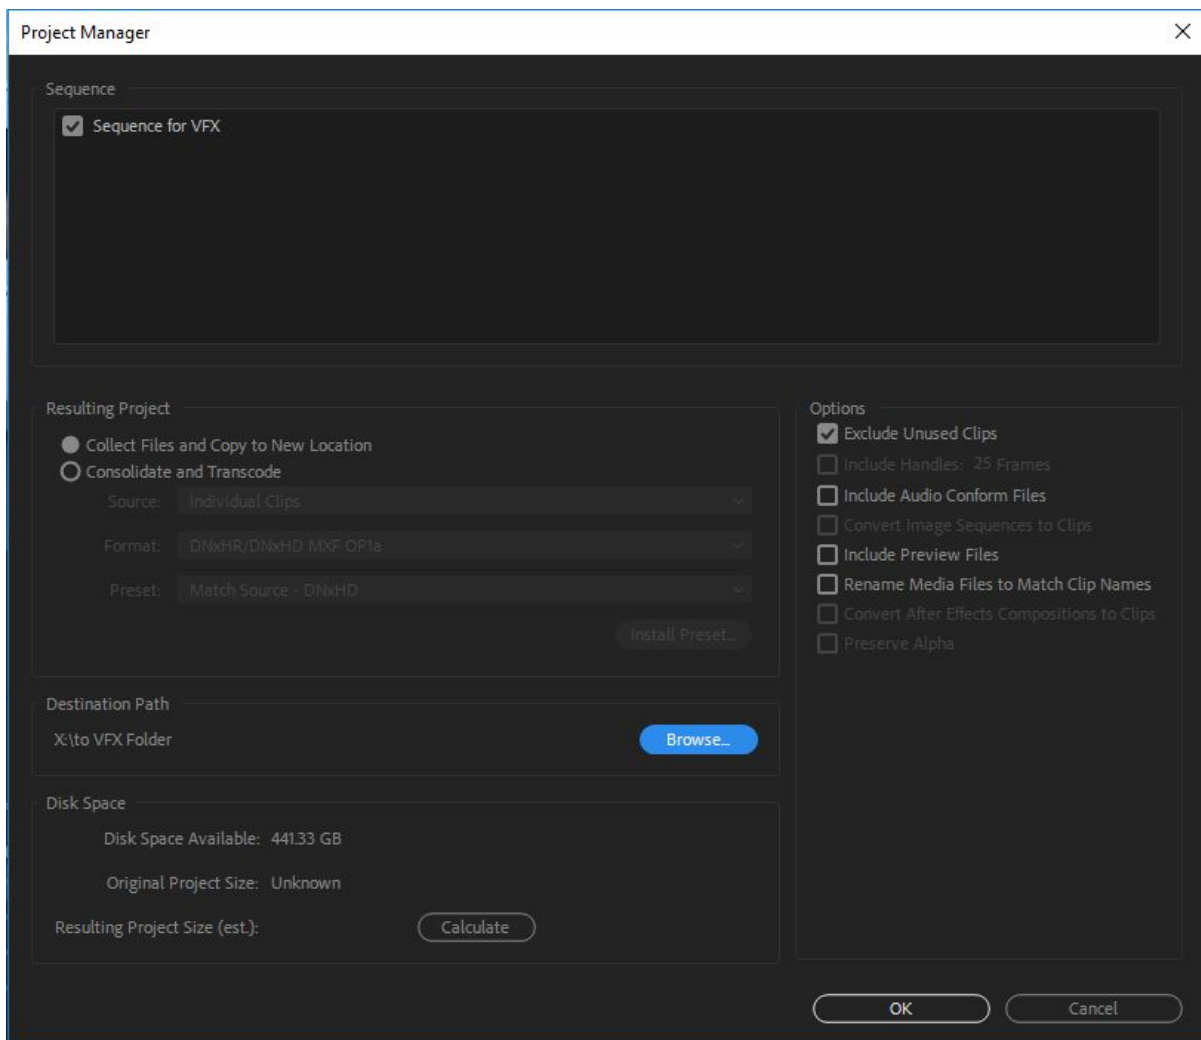

01. Make a clean and organized sequence.
02. Use the Project Manager to export the whole project.
03. Upload the whole folder to DropBox Google Drive or similar.

In detail:.

1 - Save a new project version. Duplicate your premiere sequence with a new name, (For example project_name_for_VFX) in order to keep your cut safe. In the new VFX sequence, delete all the unused stuff, and keep only the important shots in one or two layers. Save the project.

2 - In the project window, select your VFX sequence and go to File/Project Manager...

Click the checkbox near the sequence name and copy this parameters to the box:

Click OK, the media and the project copy will be stored in the selected destination path.

3 - Copy the entire resulting folder to your preferred sync app and share the folder, I use dropbox, if you have any problems I can share a folder for this, please immediately ask for help if you need some.
